Mobile Application Developer with good experience in Design, Development of applications and structures. I have more than seven years of experience in native development with rich internet services, application development, publishing applications on Google play and AppStore and unit testing. In this role I have experienced analysing application requirements, deploying the applications as necessary, monitoring and optimising the performance of the application, updating, repairing, modifying, developing existing software and generic applications. I have 10 years of valuable industry experience. I am passionate about the progression of the software engineering industry and its focus on best practice. I am responsible for a very intricate and large network of programs and systems, including their development and maintenance. I am working in mobile Applications developer as well as, I've strong knowledge of Objective-C and swift. I have excellent knowledge in Scalable RESTful APIs, XML layouts, custom design, Agile development, auto-layouts, Core Data, Realm, SQLite, signalR, SIP, E-commerce Apps, gestures, Instant Messaging Apps, parsing JOSN and XML, Location based apps, calling and messaging API's, i-Cloud messaging and In App purchases. I have extensive experience in iOS SDK, Git, JIRA and Atlassian confluence. I have good knowledge of creating, publishing and maintaining applications on apple store. Also have experience in CI/CD. I have excellent documentation, communication and interpersonal skills, with an ability to liaise effectively and professionally with individuals at all levels.

INDUSTRIES: On demand Services, Telecommunication

TECHNICAL SKILLS

• iOS	10 years
• Swift5	5 years
• ObjectiveC	4 years
• Cocoa framework	3 years
• Android	1 years

SOFT SKILLS

Communication, Teamwork, Problem-solving, creative

PROJECT DETAILS

• Safr (Uber Type Application) Ride Safr March-2020 - November-2021

Project Description: Safr is a new ridesharing service focused on the safety and empowerment of women. Build with the needs of women in mind, we aim to improve lives through safe transportation, job creation, and financial security. We offer a premium rideshare service for getting around town, to the office and home with advanced security features that keep our riders safe including: · In-person interviews · Rigorous background checks · Dual rider-driver color matching feature that ensures you get into the right vehicle · SOS button if something goes wrong during your ride · Command center built into the app in case of an emergency · Advanced driver safety training Our drivers are personally vetted and undergo comprehensive background checks in criminal and motor vehicle history, and our in-ride security features make sure you arrive at your destination safely. Drivers are paid more than the industry standard and are incentivized to provide best-in-class service. When you choose to ride with Safr you're supporting a like-minded driver and elevating your community by helping to improve greater gender balance, choice, and participation in the sharing economy. Visit https://www.gosafr.com for more information Interested in driving for Safr? Download our "Drive Safr" app to get started! For help, email us at help@gosafr.com Disclaimer: Ride Safr uses location in background while using the app and during ride, can dramatically affect battery life.

Responsibilities: ● Providing the guidelines for well-structured architecture Ensures software requirements ● Maintains acceptable service levels ● Design and develop on the bases of specifications, analyse, evaluate, test and Integrated REST full APIs Pull Request review and management ● Extensively used Objective C, UI Web Views, HTML and CSS for Hybrid mobile application development. ● Guide junior engineers in their duties when needed Recommend improvements to provide optimum reporting solutions ● Design and develop on the bases of specifications, analyse, evaluate, test and Integrated REST full APIs Pull Request review and management ● Guide junior engineers in their duties when needed

Technologies: Google Maps APIs
