EMPLOYMENT HISTORY

• Lead iOS Developer & Technical Product Owner February-2020 - March-2023

Description: Developed a SaaS iOS application , which is compatible with both iPhone as well as iPads. The application is majorly driven from the server, i.e. it is easily configurable for different businesses. Also, developed the SMB version of this iOS application, which could onboard Shopify and WooCommerce retailers , by simply going and downloading the app from app store and play store. Integrated chat support in the iOS application, where businesses could see all there Whatsapp communication as well as send Whatsapp messages from within the application. Lead the development of native android version of the same application. Gathered business requirements, converted them to technical tasks, created API contracts for the back-end team, and defined business logic for the back-end team. Solved for user experience to reduce drop off when application is installed from app store and play store, such as reducing the onboarding steps from 4 to 1 for a shopify retailer to start using our product. Integrated Whatsapp Cloud API and helped businesses get onboarded to the same. Responsible to get on technical calls with prospective clients , to understand how our SaaS product can be integrated to their already existing CRM, OMS etc. in the most efficient and secure manner. Conduct daily scrums, and quarterly retrospectives with the team. Worked closely with the CEO to define the product strategy while achieving the scalability, performance and resource costs. Part of annual performance review and appraisal of the team in collaboration with the management.

EDUCATION

• Bachelors degree in Computer Science & Engineering from WBUT 2011 - 2015

LANGUAGES

• English - native
