+91 9820045154 | hr@talrn.com

Currently I have 3 years of experience working with iOS apps of different scales. It enables me to design adjustable architecture for particular projects. Also I have a basic understanding of a backend development (Docker, Flask, SQL) that helps me to perceive the development process on a general scale.

INDUSTRIES: Social Network, Food and Beverage

TECHNICAL SKILLS

• Combine Framework	3 years
• SwiftUI	3 years
• UIkit	3 years
• ObjectiveC	3 years
• Swift	3 years

PROJECT DETAILS

• ADAMANT Blockchain Messenger — April-2022 - March-2023

Project Description: Decentralized messenger that is independent from governments, corporations, and developers. Nobody can control, block, deactivate, restrict or censor accounts.
Responsibilities: Moved the project to Combine and SwiftUI (modern Apple frameworks) • Synchronized threads and introduced thread-safety architecture to the project • Improved stability and security of the messenger by implementing nodes health check • Found and fixed the possibility of MITM attack • Adopted the messenger for using on MacOS • Fixed working of push notifications, chat UI and the Bitcoin library • Introduced the Scrum Methodology to our team
Technologies: Xcode, Swift, UIKit, SwiftUI, Combine, BitcoinKit, MessageKit
Industry: Social Network

• Cloud 53 Lounge Bar — March-2020 - December-2020

Project Description: iOS application for lounge bar with loyalty system and parking booking system. Made from zero
Responsibilities: • Implemented 2 versions of the application; the first was a simple one, the second was a more complicated app with a large update to improve all possibilities for this app • Added a progressive loyalty system, with the ability to scan customer’s QR codes • Introduced a parking booking system • Added an administrator panel via Telegram bot • Created a fully backend-driven content layout • Implemented a logging in via Apple ID and phone number
Technologies: Xcode, Swift, UIKit, SwiftUI, Combine, Firebase, Python 3
Industry: Food and Beverage

• Yandex February-2021 - April-2022

Project Description: Yandex super app with search system (like Google), news feed, phone number detector etc.

Responsibilities: • Implemented a tab for videos within this app (now it moved to the Zen app) • Added the possibility to add different images for each theme in the Yandex backend-driven UI framework (DivKit) • Implemented a unified navigation design for the entire super app • Added swiping instruments to the Yandex backend-driven UI framework • Introduced various types of cards and popups into the main feed (now it also moved to the Zen app)

Technologies: Xcode, Swift, UIKit, SwiftUI, Objective-C, Special Yandex Frameworks

Industry: Social Network
