I believe my skills and experience align closely with the job requirements, making me a strong candidate for this role. I am an ISTQB Foundation Level certified tester with over four years of experience in manual testing and one year in automation testing using selenium with python language. My expertise spans functional and non-functional testing, integration testing, database testing, and API testing using Postman. Additionally, I am proficient with tools such as JMeter, Jira, and ServiceNow.

INDUSTRIES: Pest Control

TECHNICAL SKILLS

• Manual Testing	4 years
• Jira	3 years
• Selenium	1 years
• Python	1 years
• Postman	6 months

PROJECT DETAILS

• SRF, NKA SRF and HYG SRF — January-2020 - January-2024

Project Description: Automated the cases using Selenium with Python, Functional and Non-Functional Testing, System Testing, Database Testing, Integration Testing, Cross-Browser Testing, Mobile Application Testing - Android.

Responsibilities: Automated General Info, Premise Details, and Invoice Details forms and the file upload part. Login, form submission, and dashboard APIs were tested using Postman. Tested the integration of the GST validation API, state and pin code validation API, and Mail validation API. Tested approval matrix functionality up to 5 levels. Worked closely with the central team (Icabs) and the RPA team to understand their role in the project. Interacted with technicians and the branch manager to understand the customer approval part, which was later incorporated into the project as “Digital OCC.”

Technologies: Automated the cases using Selenium with Python

Industry: Pest Control

• Easy portal - Leave Management, Attendance and Full N Final — January-2021 - December-2023

Project Description: I have used Functional and non-functional Testing, System testing, DB Testing

Responsibilities: Tested the system's ability to handle different types of policies (RPCI and Initial Users) and PL, CL, SL, and other leave types' calculations. Tested the integration of the leave management system with the attendance system. Validated that employees' data is stored in the DB and mapped properly. Evaluated the system's security measures to ensure the protection of sensitive attendance data from unauthorized access or manipulation. Tested access-wise UI and DB for approval functionality.

• Created a UAT document that covered all the functionality.

Technologies: Functional and non-functional Testing, System testing, DB Testing

Industry: Pest Control

EMPLOYMENT HISTORY

• Sr Software Tester — January-2020 - January-2024

Description: Worked as manual tester on around 35 Projects and Automated 2 projects.
