PROJECT DETAILS

• T-Mobile DIGIT'S July-2016 - September-2020

Project Description: Application lets you access your phone number and related information (call logs and messages) on virtually any iOS device without needing a SIM card associated with the number. You can use this application to place voice calls, send and receive instant messages using single and multiple lines. This application is based on the virtual line / phone number concept . Users can configure multiple phone numbers on the account and on the login and activate the phone number on the device. All the data like messages / calls and voicemails will be available for the user . And users can login to the same account on multiple devices at a time . And all the messages / calls and voicemails will be in sync on all the devices as well as physical SIM cards also.
Responsibilities: End to End UI/UX Development , Feature Implementation , Bug Fixing , Log Analysis , Managing Version Control.
