VIPIN CHAUDHARY

SENIOR SOFTWARE ENGINEER

LOCATION:G. NOIDA, INDIA

MOBILE#: 9971078190

EMAIL: VIPINCHUDHARY21990@GMAIL.COM

Domain/ Sub-Domain –

Domain/ Sub-Domain –

- Travel- Airline
- E-Commerce
- Health

Core Competency –

- Xcode
- Objective C
- Swift
- UIKit
- Coredata
- SQLite

Education –

- MCA, Thapar University

  Patiala Punjab- 2013

Profile Summary

- 6 years of IT experience with technologies **Objective C**, **Swift, Push notification, Map integration, Xcode**, **AutoLayout, Social Login integration**
- Experience in designing and developing mobile applications.
- Good Experience of AutoLayout.
- Skills in solving technical issues affecting iOS applications
- Experience of Payment API & SDK integration.
- Experience of MVC and MVVM application architecture.
- Knowledge of Provisioning, Code-signing and IPA/Build creation, App distribution on Apple developer portal. Worked with TestFlight for beta testing and distribution
- Proven experience in Swift, Objective C and Cocoa-touch Unit Testing and understanding of code versioning tools

Technology Proficiency

Technology	Objective C, Swift, UIKit, AutoLayout, XCTest Framework
Tools	Xcode, Postman
Data Storage	SQLite, Coredata, Plist, NSUserDefaults
Operating Systems	macOS, iOS
Methodologies	Agile, Waterfall

Professional Experience

Month-Year	Designation/ Role	Organisation
06/2021 -Present	Sr developer	Coforge limited
07/2020 - 05/2021	Sr developer	Teknol India pvt l.t.d
05/2019 - 06/2020	Developer	Advatix apac logistics private limited
03/2017 - 05/2019	Developer	Bizbrolly solutions private limited
01/2016 - 03/2017	Trainee/Junior developer	Logiguyz Technologies Pvt ltd

Project Details

Name of the Project: – Air India Native App			
Duration	July 21 – Present	**Role**	Sr. Software Engineer
Project Type	Application Development and Maintenance	**Technology**	Xcode, Objective C, Swift, Firebase, API's integration, Push notification,
My Responsibilities	• Regularly maintain iOS applications via debugging and continuous updates • Recognise and resolve bottlenecks when are where they occur • Implemented the force update in the Application Fixing application bugs before the final release. • Publishing application on App Store. • Maintaining the code and optimisation of the application. • Designing and implementing application updates.		

Name of the Project: – Preto3			
Duration	July 20 – May 21 (11 months)	**Role**	Sr. iOS Developer
Project Type	Application Development	**Technology**	Xcode, Swift, Objective, Cocoa pod, Postman
My Responsibilities	• Collaborating with the design team to define app features. • Ensuring quality and performance of the application to specifications. • Collaborate with cross-functional teams to define, design, and ship new features. • Identifying potential problems and resolving application bottlenecks. • Fixing application bugs before the final release. • Publishing application on App Store. • Maintaining the code and atomization of the application. • Designing and implementing application updates.		

Name of the Project – EZR Driver App			
Duration	May 19 – June 20 (13 months)	**Role**	Sr.iOS Developer
Project Type	Application Development	**Technology**	Xcode, Swift, Objective, Cocoa pod, Firebase, Push Notification
My Responsibilities	• Designing and building mobile applications for Apple's iOS platform. • Collaborating with the design team to define app features. • Ensuring quality and performance of the application to specifications. • Collaborate with cross-functional teams to define, design, and ship new features. • Unit-test code for robustness, including edge cases, usability, and general reliability. • Work on bug fixing and improving application performance. • Continuously discover, evaluate, and implement new technologies to maximize development efficiency.		

Name of the Project : Ayushman Bharat Application			
Duration	June 20 – Oct 20 (5 months)	**Role**	Sr. iOS Developer
Project Type	Application Development and Maintenance	**Technology**	Xcode, Swift, Objective c, Google map integration
My Responsibilities	• Implemented the google map in the application • Finding the near by hospitals of the particular city or location • List the hospitals on the map notation • Translate company business requirements into a prototype or working code, using appropriate programming languages and tools. • Create a graphical interface for applications, using storyboards and graphic design software. • Write code to implement user input, testing it for accuracy, and evaluating the effectiveness of the output.		

Name of the Project : The Sales Book			
Duration	Oct 18 - May 19 (8 months)	**Role**	iOS Developer
Project Type	Maintenance and Enhancement of Application	**Technology**	Xcode, Swift, Objective c, API's integration
My Responsibilities	• Implemented the chat module in the Application • In the chat module user can select the multiple video and images and publish • Feature to add the comment on other user feed • Fixing application bugs before the final release. • Publishing application on App Store. • Maintaining the code and optimization of the application. • Designing and implementing application updates.		

Name of the Project:- Mygranth			
Duration	Mar 18 - Sep 18 (7 months)	**Role**	iOS Developer
Project Type	Application Development	**Technology**	Xcode, Swift, Objective c, API's integration
My Responsibilities	• Social Login integration like Facebook, Instagram login • Google map to find the user near the particular location and show in the google map notation • Collaborating with the design team to define app features. • Ensuring quality and performance of the application to specifications. • Identifying potential problems and resolving application bottlenecks. • Fixing application bugs before the final release. • Publishing application on App Store		

Name of the Project: CCMH- PHFI			
Duration	Jan 16 – Mar 18 (24 months)	**Role**	Junior Developer
Project Type	Application Development and Support	**Technology**	Xcode, Objective C, UIKit
My Responsibilities	• Designing and building mobile applications for Apple's iOS platform. • Collaborating with the design team to define app features. • Ensuring quality and performance of the application to specifications • Facebook Login integration in the application • Twitter login integration
